

All Cap Growth

"The companies we invest in are current corporate leaders as well as those perhaps less well-known emerging growth companies..."

Purchase disciplines

- Above average EPS or revenue growth
- Catalyst for stock to appreciate
- Initial position 2-4%
- Usually 25-35 stocks within a portfolio
- Let winners run

Sell regimen

- When investment rationale changes
- The projected growth rate has a negative change
- The catalyst we identified no longer exists
- Valuation becomes less attractive
- A stronger candidate replaces it

"We invest in those few companies whose unique or proprietary advantages offer the best prospects for substantial increases revenue and earnings growth."

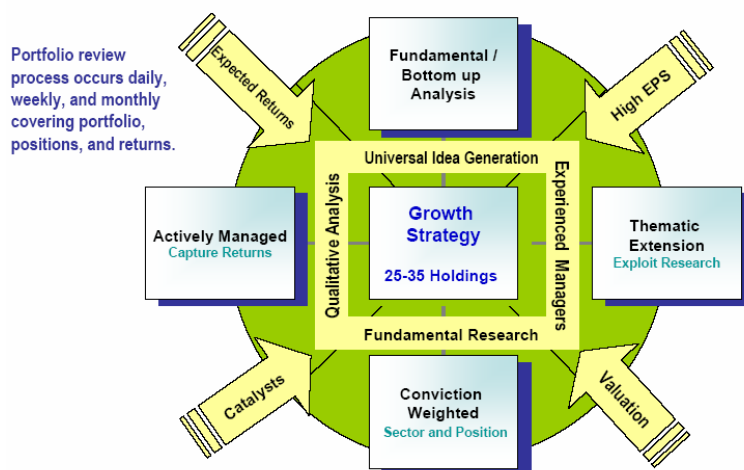

Maximize long-term total return over time by holding a portfolio of industry leading companies, across all capitalization ranges, which are believed to possess significant potential for growth.

The strategy seeks a total return that exceeds the S&P 500 Composite index over time.

Our Investment Philosophy and Principles

1. We invest in companies with sustainable, superior long-term growth prospects.
2. Earnings growth is the key determinant of excess returns over time.
3. Accelerating near term growth is a powerful element of price appreciation.
4. We seek to compound earnings growth with price earnings multiple expansion.
5. Identify catalysts to spur investor recognition independent of market conditions.
